Walmart Production Readiness — Flowchart

Walmart Production Readiness — Workflow Flowchart

Port.io TSM/TSE Assignment | April 2026

Interactive version: Open at app.diagrams.net

TODAY — Manual & Fragmented

Step	Actor	Action	Time
1	Developer	Finishes code	—
2	Developer	Manually reviews Confluence checklist	30–60 min
3	Developer	Emails platform team for approval	—
4	Platform Team	Reviews manually (no standard criteria)	2–5 days
5	Developer	Runs Snyk scan manually, results emailed as CSV	1–2 hours
6	Platform Team	Maybe approves (no on-call assigned)	—
7	Developer	Deploys to production	—
8	Operations	Incident occurs — no on-call assigned	—
9	All Teams	Postmortem + rework	1–3 days

Tools: Confluence · Email · Snyk CLI · Spreadsheets

Cost: –5M per incident | 2–5 days to production

WITH PORT.IO — Automated & Self-Service (7 Steps)

Step	Actor	Action	Tool	Time
1	Developer	Finishes code, pushes to GitHub	GitHub	—
2	Port.io	Scorecard auto-checks ALL rules instantly	Port.io	Seconds
3	Developer	Bronze/Silver/Gold score visible, gaps shown	Port.io	Instant
4	Developer	Triggers Snyk scan via Port self-service action	Port + GitHub Actions	2–3 min
5	Developer	PagerDuty on-call assigned via Port action	Port + PagerDuty	Seconds
6	Port.io	Gold scorecard = SHIP IT — automation fires, Jira ticket created, ArgoCD aligns K8s	Port + Jira + ArgoCD	Automatic
7	PagerDuty	If incident: auto-pages on-call, MTTR tracked in Port	Port + PagerDuty + Datadog	Automatic

Tools: Port.io · GitHub · Datadog · Snyk · PagerDuty · Jira · ArgoCD

Scorecard Rules (Bronze / Silver / Gold)

K8s Pod Production Readiness

- **Bronze:** Workload is Healthy (isHealthy == “Healthy”) ✅
- **Silver:** All containers have resource limits (hasLimits == true) ✅
- **Silver:** No privileged containers (hasPrivileged == false) ✅
- **Gold:** No ‘latest’ image tag (hasLatest == false) ✅

Result: ALL 6 WALMART SERVICES AT GOLD 🥇

PagerDuty Service

- **Silver:** Has PagerDuty on-call assigned ✅

Result: ALL 6 SERVICES AT SILVER 🥈

Key Metrics (Demo)

Metric	Value
Integrations (all healthy)	5
Self-service actions	9
Scorecards	6
Automations	19
Services tracked	6
K8s Pods	17
Snyk CVEs detected	8 (3C, 3H, 2M)
Datadog monitors	11
GitHub PRs	3
Jira tickets	14
ArgoCD applications	6

Outcome Comparison

	Before Port	With Port
Time to production check	2–5 days	Instant
Failed deploys/quarter	~15	~9 (40% reduction)
On-call assignment	Hours	Seconds
Security scan frequency	Monthly	Every deploy
Platform team overhead	60% of time	<5%
Visibility	5 fragmented tools	Single pane of glass
